Brite Red	.49	55
Slate Gray	.37	41
Snow White	.65	79

### What is Solar Reflectivity (SR)?

Solar reflectivity or reflectance is the ability of material to reflect solar energy from its surface back into the atmosphere. The SR value is a number from 0 to 1.0. A value of 0 indicates that the material absorbs all solar energy and a value of 1.0 indicates total reflectance. Energy Star requires an SR value of 0.25 or higher for steep slope (above 2:12) roofing and an SR value of 0.65 or higher for low slope (2:12 or less) roofing.

For more information, please go to [www.energystar.gov](http://www.energystar.gov)

### What is Solar Reflectance Index (SRI)?

The SRI is used to determine compliance with LEED requirements and is calculated according to ASTM E 1980 using values for reflectance and emissivity. Emissivity is a material's ability to release absorbed energy.
